

GREATER PRAGUE

Our ambition is to extend the city by proposing a high qualitative housing and commercial project that continues the high-rise planification of the Žižkov district, provide diversity, and interact with the neighbouring buildings and the inhabitants.

We aim the Žižkov Centre to become a significant "destination" with a positive impact project that will be a part of this new city's centre by integrating Prague's specific urban features like the local topography, the natural greens areas, the city's colorimetry, the connection to the street, the urban structure and the building stratification.

The New Žižkov project brings together all those essential local urban elements to provide a new way to feel "home" in Prague by raising the city.
